

Dear John,

All the tasks for VB are on their ways now. We have a long Lunar New Year holidays from tomorrow until next Wednesday. I plan to produce the texts displayed at the exhibition space. Please find the computer simulation of the layout of 22 models among the total 36. They are the same metric scales - 1/75. There are another 36 models at the same scale - the stacking of volumes before the FAR Game. So the two different types of models for each building will be displayed with 4 diagram, 1 photo, plan & section, and synopsis. Winy Maas will visit Seoul in March and the interview with him will be at the catalog. An expert/professor on real estate development at Seoul National University will write what you suggested. So all the essay contributors for the catalog are set. I will provide our progress with them soon.

I am glad we made a good team for the UIA forum. Thanks for the help.

Best, Sung.
