

Dear Meta,

Thanks so much for proposing an interesting topic. Of course, I agree Lars Marcus is on board. You really worked to understand Seoul's urban planning policies and urban fabric. It is amazing you even picked blocks.

Although I am interested in the relations between architecture and cities, I am not the one who knows how to process data using GIS and other software programs.

Dr. Seungbum Kim, an architect and one of our associate curators, has worked to build a database for Seoul. He collected and merged different data from three different government agencies and corrected errors manually for long time. He is willing to share his data if you consent to acknowledge his credit at your essay and further academic journals in case you use his work (I do not know, but maybe one of co-authors).

Please find attached my paper on HSD. I think Mok-dong HSD project areas might be the best examples for your type #2. If you are OK with my suggestion, Seungbum will send you the files within a few days.

Again, thank you for your proposal for the Korean Pavilion. I am excited to read your essay.

Best, Sung
